File Structure

Root directory naming

In the format YYYY_to_YYYY, the first “YYYY” represents the starting year, and the second “YYYY” represents the ending year of the Zarr files.

For example: for “2022_to_2023/”, this root directory contains raw Zarr for the entire year of 2022 (excluding 2023 dates).

Subdirectories

The “2025_to_present/” root directory contains Zarrs for each init_time, hence there are four Zarrs per day.

All other root directories contain a single Zarr i.e. “predictions.zarr”.

- It contains data for all the four init_times per day. In total 1460 times (1461 in case of leap year).
